

Correction

How many markers are needed to robustly determine a cell's type?

Stephan Fischer and Jesse Gillis*

(iScience 24, 103292-1–103292-23; November 19, 2021)

During the preparation of the revised version of the manuscript, the supplemental files containing the markers genes for BICCN cell types were duplicated. The authors have now provided the correct version of [Data S2](#) and [S3](#) containing markers for cell types of increasing granularity (class, subclass, cluster). The authors apologize for any confusion to the readers.
